

ReserveChain.io

THE INFRASTRUCTURE FOR REAL-WORLD ASSETS.

Website Development Instructions

Full Sitemap, Page Requirements, Asset Architecture, Design Direction & Acceptance Criteria

REFERENCE PACKAGE

Use the attached ReserveChain website package as the direct visual and structural benchmark. The final website must retain this level of depth while becoming a consistent, production-ready ReserveChain.io platform.

CORE POSITIONING

Institutional-grade infrastructure connecting verified physical assets with digital asset identity, custody, reserve verification, tokenization infrastructure, and redemption workflows.

1. Executive Instruction

The attached ReserveChain design package is the target design language and information-density benchmark. The developer must consolidate the strongest concepts from the supplied page revisions into one coherent production website for ReserveChain.io. The site must not be simplified into a generic crypto landing page or reduced to a small number of short pages.

PRIMARY OBJECTIVE

ReserveChain must present a complete real-world asset infrastructure platform: physical asset onboarding, independent verification, valuation, custody, Digital Asset Passports, Proof of Reserves, tokenization, participation, enterprise services, and physical redemption.

Initial asset programs

The initial ReserveChain programs are Ultrafine Copper Powder and Ultrafine Nickel Wire 0.025 mm. They must receive the strongest and most complete product-page treatment.

Expandable platform

ReserveChain must be positioned as infrastructure capable of expanding to additional real-world asset categories over time. Precious metals, gemstones, energy, real estate, art & collectibles, and other categories must be clearly identified as future/pre-launch categories until approved and activated.

Consolidate revisions

The ZIP contains multiple visual revisions of some pages. Do not create duplicate URLs. Use the strongest elements of each revision to build one definitive production page for each purpose.

No empty pages

Every page in this brief must contain page-specific content, visual hierarchy, real navigation, appropriate data components, and a complete desktop/mobile layout. No placeholder shells or repeated filler sections.

Evidence before claims

Asset status, verification, custody, reserves, valuations, certificates, legal status, and program availability must be driven by approved evidence and a single source of truth. Do not visually imply a status that has not been established.

2. Global Design & UX Standards

STANDARD	REQUIREMENT
Visual identity	Deep navy / black, warm gold, and restrained premium metallic accents. Use asset imagery to provide contextual color. Maintain the visual character of the supplied ReserveChain reference.
Brand tone	Institutional RWA infrastructure - combining secure custody, commodity/asset documentation, auditability, finance, and modern tokenization technology.
Information density	Use full-width heroes, metrics, diagrams, lifecycle flows, data dashboards, comparison tables, asset cards, document panels, timelines, status badges, galleries, and strong CTAs where appropriate.

STANDARD	REQUIREMENT
Asset imagery	Use high-resolution industrial and physical-asset imagery. For actual asset/reserve evidence, use approved real photographs and documents. Concept art must never be presented as proof of ownership, custody, certification, or reserves.
Typography	Premium display typography for major headings; clean sans-serif typography for data, tables, forms, portal interfaces, disclosures, and technical content.
Navigation	Use clear mega-menu/dropdown organization for Platform, Assets, Enterprise, Investors/Participation, Company, Resources, and Portal. Desktop and mobile navigation must expose the same information architecture.
Responsive behavior	Every page, table, dashboard, form, process flow, asset gallery, and portal screen must work on desktop, tablet, and mobile without horizontal clipping or unusable controls.
Accessibility	Semantic heading order, meaningful alt text, visible keyboard focus, sufficient contrast, accessible form labels/errors, and logical tab order.
Performance	Optimize image formats and dimensions, lazy-load noncritical media, minimize layout shift, and avoid decorative animation that degrades loading or mobile performance.

3. Required Main Navigation

The production navigation should be organized around the actual ReserveChain platform rather than around individual screenshots. Recommended header structure:

Platform - Overview | How ReserveChain Works | Platform Infrastructure | Technology | Security | Independent Verification | Custody & Vault Structure | Proof of Reserves | Digital Asset Passports | Tokenization | Physical Redemption

Assets - Explore Real-World Assets | All Asset Programs | Initial Asset Programs | Industrial Metal Programs | Ultrafine Copper Powder | Ultrafine Nickel Wire 0.025 mm | Future Asset Categories

Enterprise - Enterprise Services | Enterprise Tokenization Services | Technology Licensing & White-Label | Asset Owners & Originators | Industrial Buyers

Participation / Investors - Early Participation Program | Program Overview | How Token Acquisition Will Work | 20% Discount Methodology | Eligibility & KYC | Restricted Jurisdictions | Join the Waitlist | Investor Presentation

Company - About ReserveChain | Corporate Development Status | Governance | News & Announcements | Contact

Resources - Resources | Documentation | Whitepaper | FAQ | Risk Disclosure | Anti-Fraud Notice | Legal & Disclosures | Support

Portal - Participant Portal | Redemption Portal

PRIMARY HEADER CTA: EXPLORE ASSETS SECONDARY CTA: PORTAL / JOIN WAITLIST

4. Full Page Assignment List - 51 Required Pages

The following list consolidates the attached ReserveChain reference package into a clean production sitemap. Repeated screenshots are design revisions, not duplicate URLs.

4. Page Requirements - Core

1	Home
Title	Tokenizing the World's Real-World Assets
Scope	Primary homepage. Include positioning, trust pillars, platform metrics, two initial asset programs, future asset categories, physical-to-digital lifecycle, Digital Asset Passport example, Proof of Reserves dashboard, enterprise capabilities, Early Participation CTA, and complete footer navigation.

4. Page Requirements - Company

2	About ReserveChain
Title	Building the Infrastructure for Real-World Assets
Scope	Mission, vision, core principles, who we are, what we do, platform thesis, initial programs, expansion model, and institutional positioning.
3	Corporate Development Status
Title	Transparent Development. Institutional Standards.
Scope	Visual project-status dashboard covering corporate, technology, platform, legal, asset onboarding, verification, custody, tokenization, documentation, launch readiness, and completed/in-progress/planned states.
4	Governance
Title	Built on Integrity. Governed for Long-Term Value.
Scope	Governance framework, corporate oversight, platform governance, asset governance, conflicts management, security/compliance oversight, future committees, policies, and governance roadmap.
5	News & Announcements
Title	News & Announcements
Scope	Project milestones, platform updates, asset program developments, partnerships, document releases, technology milestones, media/news cards, and archive/filter structure.
6	Contact ReserveChain.io
Title	Contact ReserveChain.io
Scope	Full contact page with inquiry routing for general enquiries, asset owners, industrial buyers, institutions, enterprise tokenization, licensing, media, compliance, support, and Early Participation questions.

4. Page Requirements - Platform

7	How ReserveChain Works
Title	From Physical Asset to Digital Ownership Infrastructure
Scope	Visual lifecycle: Identify / Source -> Verify -> Value -> Custody -> Passport -> Tokenize -> Reconcile -> Redeem. Explain who performs each stage, evidence generated, controls, and participant visibility.
8	Platform Infrastructure for Real-World Assets
Title	Institutional Infrastructure for Physical Assets
Scope	Architecture page showing asset registry, Digital Asset Passports, independent verification, custody, compliance controls, tokenization engine, reserve/reconciliation engine, APIs, participant access, enterprise portal, and reporting.
9	Technology
Title	The Technology Powering Real-World Asset Tokenization
Scope	Blockchain architecture, smart contracts, asset registry, passport records, reserve engine, APIs, security layers, audit logs, access controls, integration model, scalability, and technology roadmap.
10	Security
Title	Institutional Security for Real-World Asset Infrastructure
Scope	Application security, identity/access controls, infrastructure security, data protection, logging/monitoring, key-management approach, portal security, incident response, vendor controls, and security testing. Avoid unsupported certifications.
11	Independent Verification
Title	Trust Is Built Before an Asset Is Tokenized
Scope	Verification workflow, independent inspection/testing, certificate/document validation, sampling methodology where applicable, third-party laboratories, valuation review, chain of evidence, reverification, and verification-status display.
12	Custody & Vault Structure
Title	Secure. Controlled. Auditable.
Scope	Institutional custody model, segregation, chain of custody, access controls, warehousing/vault structure, inventory records, insurance where applicable, inspections, audit/reconciliation, asset release, and redemption controls.
13	Proof of Real-World Asset Reserves
Title	Transparent. Verifiable. Reconciled.
Scope	Reserve methodology, physical inventory, eligible reserves, tokenized reserves, reserve coverage, reconciliation frequency/status, supporting documents, verification history, exceptions, and reserve dashboard design.
14	Digital Asset Passports
Title	A Persistent Digital Identity for Every Asset Unit
Scope	Explain unique Asset IDs, specifications, certificates, provenance/source, verification, custody, valuation, reserve status, tokenization status, blockchain references, history, QR access, and downloadable evidence.

15	Tokenization
Title	Connecting Verified Physical Assets to Digital Infrastructure
Scope	Explain onboarding, eligibility, asset identity, legal/operational linkage, smart-contract issuance controls, token lifecycle, transfer rules, reconciliation, retirement/burn, and redemption. Do not imply active trading before activation.
16	Physical Redemption
Title	From Digital Position to Physical Asset Delivery
Scope	Visual process: Redemption Request -> Eligibility -> Verification -> Settlement/Burn -> Custody Release -> Logistics/Collection -> Completion. Include fees/thresholds only when approved.

4. Page Requirements - Portal

17	Redemption Portal
Title	Redeem Real Assets. Seamlessly. Securely.
Scope	Functional portal concept with eligible holdings, request creation, quantity/asset selection, KYC/compliance state, settlement status, custody release, delivery/collection, documents, support, and history.

4. Page Requirements - Assets

18	Explore Real-World Assets
Title	Explore Real-World Assets
Scope	Asset marketplace/catalogue style page. Initial programs first; future categories clearly labeled pre-launch. Filters may include asset class, program status, verification, custody, passport, tokenization status, and availability.
19	All Asset Programs
Title	All Real-World Asset Programs
Scope	Master program directory covering current, upcoming, and future asset programs. Use status badges and link to full program pages. Do not present future categories as active holdings.
20	Initial Asset Programs
Title	Initial Asset Programs
Scope	Dedicated page presenting Ultrafine Copper Powder and Ultrafine Nickel Wire 0.025 mm as the first ReserveChain programs, including key specs, use cases, verification/custody framework, passports, reserve model, and CTAs.
21	All Industrial Metal Programs
Title	All Industrial Metal Programs
Scope	Industrial-metal hub. Show Copper Powder and Nickel Wire prominently plus clearly separated future industrial-metal program concepts if approved. Include workflow and sector/use-case context.

4. Page Requirements - Asset Program

22	Ultrafine Copper Powder
Title	Ultrafine Copper Powder - Asset Program
Scope	Full program page using approved specifications and certificate data: hero, product overview, technical specifications, verification, laboratory documentation, custody, Digital Asset Passport, Proof of Reserves, image gallery, use cases, tokenization status, documents, redemption, and participation CTA.
23	Copper Powder Product Gallery
Title	Ultrafine Copper Powder - Product Gallery
Scope	Evidence-oriented gallery with approved real product photographs, packaging, macro views, production/handling imagery where approved, certificate previews, captions, file metadata, and links back to the asset program/passport. No generated image should be labeled as proof of product.
24	Ultrafine Nickel Wire 0.025 mm
Title	Ultrafine Nickel Wire 0.025 mm - Asset Program
Scope	Full program page: hero, diameter and approved technical specifications, verification/certificate evidence, custody, Digital Asset Passport, Proof of Reserves, product images, applications, documents, tokenization status, redemption, and CTA.
25	Nickel Wire Product Gallery
Title	Nickel Wire 0.025 mm - Product Gallery
Scope	High-resolution gallery with case/packaging images, ultrafine wire macro views, spools/reels where accurate, measurement/verification imagery, certificate preview, captions, and evidence links. Visuals must accurately represent the 0.025 mm wire scale.

4. Page Requirements - Assets

26	Future Asset Categories
Title	Future Real-World Asset Categories
Scope	Overview for future expansion into Precious Metals, Gemstones, Energy Assets, Real Estate, Art & Collectibles, and Other Assets. Every card must be explicitly marked Future Category / Pre-Launch until formally activated.

4. Page Requirements - Participation

27	Early Participation Program
Title	Early Participation Program for Real-World Asset Infrastructure
Scope	Dedicated program page explaining purpose, participant profile, program stage, eligibility, methodology, initial assets, safeguards, documentation, process, risks, and waitlist access. Token issuance remains inactive until formally launched.
28	Program Overview
Title	Early Participation Program Overview
Scope	Detailed overview of program structure, initial asset programs, platform benefits, steps, compliance, allocation/acquisition logic where approved, methodology links, documentation, risk factors, and status.
29	How Token Acquisition Will Work
Title	How Token Acquisition Will Work
Scope	Visual process: Create Account -> Eligibility -> KYC/KYB -> Review Available Program -> Review Documents -> Acquisition/Settlement -> Account/Wallet -> Portfolio -> Redemption. Mark future functionality as planned until active.
30	20% Discount Methodology
Title	20% Discount Methodology
Scope	Methodology page with valuation reference, calculation formula, worked examples, eligibility, program limits, conditions, exclusions, risk disclosures, and governance/approval. Never display the percentage as an unexplained promotional claim.
31	Eligibility & KYC
Title	Eligibility & KYC
Scope	Individual/corporate eligibility, KYC, KYB, AML, sanctions screening, source of funds/source of wealth where required, enhanced due diligence, document requirements, approval states, and access restrictions.
32	Restricted Jurisdictions
Title	Restricted Jurisdictions
Scope	Dedicated legal/compliance page covering geographic restrictions, participant responsibility, eligibility controls, sanctions, blocked access, updates, and referral to final legal documentation.
33	Join the Early Participation Waitlist
Title	Join the Early Participation Waitlist
Scope	Full landing page: reasons to join, what is currently available, who may register interest, process, expected communications, compliance notice, FAQ, consent, and waitlist form.

4. Page Requirements - Market

34	Industrial Buyers
Title	Secure. Compliant. Reliable.
Scope	Buyer-focused page for manufacturers, processors, industrial purchasers, and qualified counterparties. Explain verified materials, documentation, sourcing, custody, procurement workflow, physical delivery/redemption, and institutional inquiries.
35	Asset Owners & Originators
Title	Bring Real-World Assets Into Digital Infrastructure
Scope	For producers, asset owners, originators, suppliers, custodians, and institutional asset holders. Explain submission, due diligence, verification, valuation, custody, registry/passport creation, reserve controls, tokenization path, and commercial inquiry process.

4. Page Requirements - Enterprise

36	Enterprise Services
Title	Build Real-World Asset Infrastructure at Institutional Scale
Scope	Overview of enterprise modules: asset onboarding, registry, passports, verification integrations, custody integrations, compliance, tokenization, reserve engine, reporting, APIs, portals, customization, and managed services.

37	Enterprise Tokenization Services
Title	Tokenization Infrastructure for Real-World Assets
Scope	B2B page for institutions seeking asset-tokenization infrastructure. Cover onboarding, data models, smart contracts, rule engine, custody/reserve integration, participant controls, reporting, APIs, deployment, governance, and enterprise CTA.

38	Technology Licensing & White-Label
Title	Launch Your Own Real-World Asset Platform
Scope	Full licensing page: white-label platform, modules, branding, APIs, asset registry, passport engine, compliance integration, tokenization infrastructure, reserve engine, portals, analytics, deployment, support, licensing model, and enterprise inquiry CTA.

4. Page Requirements - Investor / Strategy

39	Future of Real-World Asset Infrastructure
Title	Invest in the Future of Real-World Asset Infrastructure
Scope	Strategic platform thesis: market problem, infrastructure opportunity, initial programs, scalable asset-class model, enterprise revenue opportunities, technology moat, development roadmap, governance, risks, and approved investor CTA. Use investment language only within approved legal structure.

4. Page Requirements - Resources

40	Resources
Title	Knowledge. Transparency. Confidence.
Scope	Central hub linking to Documentation, Whitepaper, Investor Presentation, program methodology, verification, custody, Digital Asset Passports, Proof of Reserves, tokenization, compliance, legal, FAQs, and news.
41	Documentation
Title	Documentation
Scope	Structured library for Platform, Technology, Asset Programs, Certificates, Verification, Custody, Reserve Reports, Compliance, Enterprise, Participation, Policies, Legal, and version-controlled releases.
42	Whitepaper
Title	ReserveChain Whitepaper - In Preparation
Scope	Full whitepaper landing page showing status, purpose, planned chapters, architecture, asset framework, verification/custody/reserves, tokenization, compliance, enterprise model, roadmap, risk, governance, version/date, and future download.
43	Investor Presentation
Title	Investor Presentation - Real-World Asset Infrastructure
Scope	Dedicated presentation page with platform thesis, initial programs, expansion opportunity, infrastructure modules, business model, roadmap, risks, governance, document version/date, preview, and approved download.
44	Frequently Asked Questions
Title	Frequently Asked Questions
Scope	Organize by Platform, Assets, Copper Powder, Nickel Wire, Verification, Custody, Proof of Reserves, Digital Asset Passports, Tokenization, Early Participation, KYC, Redemption, Enterprise, Technology, and Legal & Risk.

4. Page Requirements - Legal / Risk

45	Risk Disclosure
Title	Understand the Risks Before Participating
Scope	Comprehensive RWA-specific risks: asset authenticity/specification, valuation, market/liquidity, custody, insurance, counterparty, logistics, regulatory classification, token/asset linkage, smart contracts, blockchain, wallets, technology, jurisdiction, taxes, program changes, and redemption.

4. Page Requirements - Legal / Security

46	Anti-Fraud Notice
Title	Protect Yourself. Verify Official Communications.
Scope	Official domains/channels, fake token warnings, fake presales, impersonation, fake agents, wallets, payment instructions, social-media scams, phishing, document fraud, verification steps, and suspicious-activity reporting.

4. Page Requirements - Legal

47	Legal & Disclosures
Title	Legal & Disclosures
Scope	Central legal hub linking to current entity/operator information, pre-launch status, risk disclosure, participation restrictions, terms, privacy, disclaimers, intellectual property, third-party data, and future offering documentation.

48	Privacy Policy
Title	Privacy Policy
Scope	Identify current data controller/operator, collected data, purposes, account/portal data, KYC/KYB data where applicable, service providers, transfers, retention, cookies/analytics, security, user rights, marketing, contact, and policy changes.

49	Terms of Use
Title	Terms of Use
Scope	Website operator, pre-launch status, eligibility, jurisdiction restrictions, no-offering language where applicable, information limitations, asset data, valuation/certificates, third parties, acceptable use, IP, portals, warranties, liability, termination, governing law, updates, and contact.

4. Page Requirements - Support

50	Support
Title	ReserveChain Support
Scope	Support hub with platform help, account/portal support, asset-program questions, enterprise support, documentation, status information, security/fraud reporting, ticket/contact form, and FAQ routing.

4. Page Requirements - Portal

51	Participant Portal
Title	ReserveChain Participant Portal
Scope	Functional portal architecture: account/profile, KYC/KYB status, available programs, holdings/positions, Digital Asset Passports, documents, transactions, notices, reserve information, redemption access, support, and security settings.

5. Mandatory Template for the Two Initial Asset Program Pages

Ultrafine Copper Powder and Ultrafine Nickel Wire 0.025 mm are the initial ReserveChain asset programs. Their pages must function as full asset-program and evidence hubs, not simple marketing product pages.

- Premium hero with asset/program name, approved high-resolution imagery, status, and concise key specifications
- Program overview and asset thesis
- Approved product/technical specifications
- Material characteristics and quality parameters
- Independent verification workflow and current verification status
- Certificate / laboratory documents and document metadata where publication is approved
- Asset source/origin/provenance information where documented
- Valuation methodology / reference information where approved
- Custody / warehouse / vault status and chain-of-custody information
- Insurance status where applicable and approved
- Unique Asset ID / lot / batch identifiers
- Digital Asset Passport visual and link
- Asset Registry record
- Proof of Reserves / reserve reconciliation information
- Tokenization status and supply relationship where active/approved
- High-resolution real product gallery
- Production/handling/measurement imagery where accurate and approved
- Downloadable documents and evidence panel
- Verification / custody / reserve timeline
- Industrial applications and market/use-case context
- Physical redemption / delivery framework
- Related programs / future categories
- Early Participation or enterprise inquiry CTA

6. Future Asset Category Presentation

ReserveChain is designed to expand beyond the two initial industrial-metal programs. The website may visually present future categories, but the status distinction must be unmistakable.

Future categories

Precious Metals, Gemstone Assets, Energy Assets, Real Estate Opportunities, Art & Collectibles, and Other Assets may appear as future categories.

Status badge

Use a consistent FUTURE CATEGORY / PRE-LAUNCH status badge. Do not show Verified, In Custody, Tokenized, Available, or reserve metrics unless a real program has been onboarded and approved.

Illustrative imagery

Conceptual imagery is acceptable for future-category storytelling, but must not be presented as an actual ReserveChain-held asset.

Activation path

When a future category becomes active, create an approved program page, registry records, Digital Asset Passports, verification/custody evidence, and reserve reporting before changing status.

7. Global CTA Button Library

Explore Assets	How ReserveChain Works	View Initial Programs
View Copper Program	View Nickel Program	View Product Gallery
View Asset Registry	View Digital Asset Passport	View Reserve Report
View Verification Process	Explore Custody	Learn About Tokenization
How Redemption Works	Join Waitlist	Check Eligibility
View Program Overview	View Documents	View Whitepaper
View Investor Presentation	Enterprise Services	Technology Licensing
Submit an Asset	Contact ReserveChain	Access Portal

8. Data Integrity, Evidence & Status Discipline

Single source of truth

Every asset/program value shown on the homepage, program pages, asset registry, Digital Asset Passports, Proof of Reserves, dashboards, and portal must originate from one canonical record. No manually duplicated values that can diverge.

Approved specifications only

Purity, diameter, quantity, certificate number, laboratory, valuation, custody, reserve coverage, tokenized quantity, and similar factual data must be published only from approved source records.

No false status labels

Do not label an asset Verified, Certified, Secured, In Custody, Tokenized, Available, or Redeemable unless that status is actually supported and authorized for publication.

Demo / illustrative data

Any demonstration dashboard or mock asset data must be clearly marked ILLUSTRATIVE / DEMO DATA and visually distinguishable from live production data.

Future asset categories

Never mix pre-launch future categories into current reserve totals or active program statistics.

Real evidence vs concept art

Actual reserve/product evidence must use approved real photographs and documents. Generated/conceptual visuals may support storytelling but cannot be used as reserve, custody, verification, or certificate evidence.

Status consistency

Corporate development, platform stage, token issuance, participation availability, and legal status must use consistent wording throughout the website and portal.

9. Technical & Production Requirements

- Unique SEO title and meta description for every public page
- Canonical URLs, XML sitemap, robots configuration, and controlled pre-launch indexing
- Open Graph / social metadata with approved brand imagery
- Structured data where appropriate without misleading financial/product schema
- Responsive WebP/AVIF images, lazy loading, and defined image dimensions
- Mobile-safe tables, dashboards, certificate previews, process diagrams, and galleries
- Accessible forms, validation, labels, keyboard behavior, and error states
- Reusable CMS/data components for program cards, asset records, Digital Asset Passports, reserve metrics, document cards, status badges, timelines, FAQ, and CTA blocks
- Portal authentication with secure password reset, rate limiting, session expiration, MFA-ready architecture, audit logging, and role-based access
- Security headers such as CSP and HSTS where deployment architecture permits
- Central data model/API so public pages and portal read the same approved asset/program information
- 404/500 pages and graceful API/data error states
- Analytics/event architecture with privacy controls and consent where required
- Clean URL slugs, production asset naming, alt text, and versioned documents
- Staging environment QA before production deployment
- Backup, deployment, rollback, environment/configuration, and content-update procedures documented at handoff

10. What the Developer Must NOT Deliver

- A simple homepage with only a few generic sections
- A generic cryptocurrency theme with token coins replacing the physical-asset story
- Pages that reuse the same text under different headings
- Future asset categories presented as current reserves or active programs
- Product images that misrepresent the scale or physical characteristics of Copper Powder or 0.025 mm Nickel Wire
- Unverified certificates, reserve totals, valuations, statuses, partners, audits, or security certifications
- Public demo credentials on production pages
- Broken mobile tables, clipped dashboards, tiny unreadable text, or image-heavy pages with poor performance
- Duplicate URLs for multiple screenshot revisions of the same concept
- A site that looks like a materials catalogue only - ReserveChain must clearly communicate the infrastructure layer

11. Developer Acceptance Criteria

51 defined page assignments	All pages in this brief are implemented, or intentionally staged according to the approved development phase. No silent omissions.
Two complete initial programs	Copper Powder and Nickel Wire pages include specifications, evidence architecture, galleries, verification, custody, Digital Asset Passports, Proof of Reserves, tokenization status, documents, and redemption context.
Reference-level design depth	The production site retains the information richness, full-page composition, premium dark/gold visual system, diagrams, dashboards, and content density shown in the attached reference package.
RWA infrastructure story	The website clearly explains the lifecycle from physical asset through verification, custody, digital identity, tokenization, reserve reconciliation, participation, and redemption.
Future/current separation	Future categories remain clearly pre-launch and are never mixed into current program/reserve claims.
No contradictions	Asset specifications, verification, custody, certificates, reserve status, legal status, and program availability are consistent across public site and portal.
Responsive QA	Desktop, tablet, and mobile are tested for navigation, forms, galleries, document panels, dashboards, tables, process flows, portal screens, and footer.
Security & performance	No exposed demo credentials, broken authentication flows, major layout shift, unoptimized critical imagery, unreadable content, or insecure public configuration.
Handoff documentation	Provide source code, repository structure, CMS/data model, component inventory, API documentation, environment/configuration guide, deployment/rollback process, content-management instructions, and operational notes.

12. Final Design Direction

RESERVECHAIN MUST PRESENT ONE COHERENT CHAIN OF TRUST

PHYSICAL ASSET -> VERIFY -> VALUE -> CUSTODY -> DIGITAL ASSET PASSPORT -> TOKENIZE ->
RECONCILE -> PARTICIPATE -> REDEEM

The physical asset creates the economic foundation. Evidence, custody, reserve reconciliation, and transparent infrastructure create trust.
